INSTALLING THE ROSETTA STONE FROM THE BRIGADE LANGUAGE SERVER ONTO RCAS MACHINES

There are two components to The Rosetta Stone: the client application and the language data. The client application must be installed on each of the individual RCAS workstations. The data is shared from the brigade's language server.

Install The Rosetta Stone application on the RCAS workstation:

- Create a new folder entitled "Rosetta" on your hard drive
- Under "Network Neighborhood," locate and double-click on the "Mi-Lang" computer.
- Locate and double-click on the "client" folder.
- Under the "View" menu, select options and ensure that the view is set to "show all files." (This is necessary so you can copy the driver files that are normally hidden.)
- Under the "Edit" menu, choose "Select All."
- From the "Edit" menu, choose "Copy."
- In the window which shows your hard drive, locate the "Rosetta" folder you created. Right-click on it and select "Paste." (This will copy all of the files from the "client folder on the server," so it may take 10 to 20 minutes, depending on the speed of your computer.)
- When the file copying is complete, double-click on the "Rosetta" folder.
- Locate the icon for the file entitled "setup.exe" and double-click it. Follow the instructions, which will perform the actual installation of the of the client application on your machine.

Configure the workstation to use the shared language data:

- Under "Network Neighborhood," locate and double-click on the "Mi-Lang" computer.
- Right-click on the folder containing the language you want to access and select "Map Network Drive."
- Set the workstation to "Reconnect at logon" to the network drive.
- Repeat bullets two and three for each of the languages you would like to install.

When these steps have been completed, you should be able to find and launch The Rosetta Stone from your "Start" menu. Create a logon for yourself and enjoy the program!

If you have any questions, please contact the brigade CLPM at (801) 523-4258.
